

CLEANER TECHNOLOGY FOR A GREENER WORLD

Business is going well. Everyone wants what you have to offer. And you're eager to expand to meet the demand.

But there's a lot to consider. Sarbanes-Oxley regulations. European Union environmental statutes. Hazardous waste prohibitions in China. There's waste stream management laws, recycling mandates and toxic chemical bans. Not to mention municipal ordinances, shareholder initiatives and pending legislation. One little mistake can mean legal investigations, fines, penalties – and possibly worse.

So how do you make sure you're following the environmental rules and regulations while you deliver your product to consumers – whether they're around the corner or around the world?

Botsford EcoTech Partners can help.

At Botsford we understand that market leadership and sound environmental practices go hand in hand, and we have the expertise to help your company achieve both. Whether you are a multi-national equipment manufacturer, an industrial components broker, or a small electronics firm just starting out, Botsford provides customized solutions for your eco-compliance and waste stream management needs. No matter your company's size, we want to help you find savings and efficiencies while you meet the changing demands of the legislative and environmental landscape. Because we believe you don't ever want to have to choose between a successful business decision and a sound environmental policy. And neither do we.

WHAT WE DO

Botsford EcoTech Partners provides consulting, education and documentation services to make certain your company's business practices comply with environmental laws and waste stream management legislation in the local, national and international marketplaces. Our services include:

Strategy Planning & Implementation

Botsford delivers a proven process to prepare companies to meet current and future legislated environmental directives. We can teach you how to effect eco-compliance oversight autonomously, or we can provide guidance and oversight at each step of the way.

Workshops & Seminars:

Botsford presents customized workshops and seminars for both public and private forums. From guidelines for creating a comprehensive eco-compliance strategy to customized seminars on specific regions, products, and types of regulations (such as RoHS), we can get your company up to speed on current and near-future environmental legislation.

Product Assessments and TCFs

Maintaining sound technical compliance files (TCFs) and product assessments are the cornerstone of a successful eco-compliance strategy, and are legally required and auditable documents in many jurisdictions. Let Botsford work with your in-house team to create a comprehensive documentation system, or we can collect, monitor, and assess the data for you.

Web-enabled Eco-Compliance Software: Equipment Life-cycle Management (ELM) Software

Botsford ELM software automates all the necessary eco-compliance steps at each phase of product design, development and sale. Designed from the ground-up to track global regulations and meet Sarbanes-Oxley risk identification and mitigation planning, ELM software is the industry gold-standard for eco-compliance programs.

Think of Botsford EcoTech Partners as your first and last line of defense for all your eco-compliance and waste management issues. Call us today at **603.589.2502** or e-mail **info@botsfordeco.com** for more information and a customized quote.
